## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a method of forming an intermediate dielectric isolated silicon structure, classified in class 438, subclass 221+.
- II. Claims 19-20, drawn to a silicon-dioxide isolated epitaxial silicon structure, classified in class 257, subclass 510+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process. For example, the method of forming the silicon island comprises the steps of: depositing a silicon layer to fill a trench pattern, exposing sidewalls of the trench pattern by etching gaps in the silicon layer; and forming dielectric spacers by filling the gaps with an oxide layer.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2815

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
